TO REACH CRO GOALS

CRO - Climate Recovery Ordinance / CAP - Climate Action Plan

COMMUNITY CLIMATE RECOVERY ORDINANCE GOALS

Reduce Fossil Fuel Use

50% reduction by 2030 compared to 2010

Reduce Community-wide GHG Emissions

Science-based goal to reduce ghgs to
Eugene's average share of 350ppm by 2100

*Fort Collins, Providence and Knoxville are included as cities of comparable size to Eugene. Seattle and Portland are also included to provide a regional perspective.

**Sector-based accounting is used in these charts except where otherwise noted. Eugene is one of a handful of communities in the nation to publish a consumption-based inventory and the only community that staff is aware of to base its climate goals on this accounting methodology.

Per Capita Greenhouse Gas Emissions

*Fort Collins, Providence and Knoxville are included as cities of comparable size to Eugene. Seattle and Portland are also included to provide a regional perspective.

**Sector-based accounting is used in these charts except where otherwise noted. Eugene is one of a handful of communities in the nation to publish a consumption-based inventory and the only community that staff is aware of to base its climate goals on this accounting methodology.

EUGENE CLIMATE COLLABORATIVE

LARGE LEVER SHAREHOLDERS

By starting with the engagement of systems level actors, we are laying the foundation to make it easier for everyone – individuals, households, businesses, and other organizations – to take actions that support the CRO goals.

ECC partners are defined as organizations who have significant oversight and impact on community-wide fossil fuel use and greenhouse gas emissions or have the ability to affect or alter systems that will enable the community to adapt and prepare for climate change.

EUGENE'S GREENHOUSE GAS EMISSIONS

CONSUMPTION

TRANSPORTATION
FUELS

ENERGY USED IN
BUILDINGS

Projected GAP

After accounting for population growth and CAP Reductions from existing policy - there remains a "gap" of about 450,000 MT CO₂e to reach the CRO 2030 GHG Goal (green dotted line)
